Key Message 2

Heart attack symptoms go unrecognized in over 50% of women. Women are more likely to present with 3 or more symptoms in addition to chest pain (see image). Help us raise awareness and spread the word. Join us on February 13 and wear RED!
Visit WearRedCanada.ca for all the details.

#HerHeartMatters #WearRedCanada @Wear Red Canada / TLM en Rouge @CWHHC
@University of Ottawa Heart Institute Foundation @University of Ottawa Heart Institute

Key Message 3

The types of heart disease can be different for women than men. Some common types are:

- Coronary artery disease
- Valvular heart disease
- Arrhythmia (irregular heart beat)

Women are more likely than men to have:

- Spontaneous coronary artery dissection (SCAD)
- Coronary vasospasm
- Microvascular dysfunction (small-vessel disease)
- Takotsubo (stress-induced) cardiomyopathy (disease of the heart muscle)
- Peripartum cardiomyopathy (weakened heart during or after pregnancy)

Some health providers may be less aware of the differences between women and men.

Join us on February 13 and wear RED! Visit WearRedCanada.ca for details.
